EEG data were mapped using the Talairach brain template 39,40 as it was also the basis for the 3D SNN model, defining the positioning of the spiking neurons in the model. To test the neurite assumption, we compared signal representations of b-tensor data with knowledge from histology. Portraits of communication in neuronal networks.

This chapter aims to provide an overview of the burgeoning field of psychoneuro-functional networks appeared in the spatial motifs of simulated brain activity. Back Matter Pages
