As evolutionary models of stars were developed during the s, it was shown that, for stars of a uniform chemical composition, a relationship exists between a star's mass and its luminosity and radius. Smith 21 April Bibcode:AJ The energy is carried by either radiation or convection with the latter occurring in regions with steeper temperature gradients, higher opacity or. Until that happens, Stars That Turn, the surrounding gas absorbs the radiation, emitting light of its own of a variety of wavelengths. As non-fusing helium ash accumulates in the core of a main-sequence star, the reduction in the abundance of hydrogen per unit mass results in a gradual lowering of the fusion rate within that mass.
