Major developments in social democracy as a whole emerged with the ascendance of Eduard Bernstein as a proponent of reformist socialism and an adherent of Marxism. In the general election the Labour Party won a plurality of seats and was elected as a minority government, but required assistance from the Liberal Party to achieve a majority in parliament. It looks at the fault-lines established in the eighteenth century for later developments in social and political discourse and considers the implications for the political representation of women in the West and globally, highlighting how women public intellectuals now reflect much more social and cultural diversity.
