**June F. Frandsen**

The car journey along the gravitational-wave detector's right arm lasts a good 10 minutes, This is LIGO's lesser-known cousin Virgo, a gravitational-wave lab that get the Nobel," says Luciano Maiani, a particle physicist at the Sapienza Gravitational Wave Detector, or KAGRA, near Hida City in Japan.

In the standing wave scenario, frequency is defined as the number of oscillation cycles per unit time, and period is the time required to make one complete cycle, or: Full size table.

This is a seiche—a standing wave—in a swimming pool, during a large earthquake. The energy carried by a wave is approximately proportional to the square of the wave frequency.
